Bellevue Transit Center

The Bellevue Transit Center was expanded to include ten bus bays, shelter improvements and rider amenities. Additional bus stops and roadway improvements on 108th Avenue Northeast, 106th Avenue Northeast and east of the transit center on Northeast Sixth Street have improved transit and traffic flow in downtown Bellevue and enable more than 100 buses during peak periods to move efficiently through the transit center. Direct access improvements on Northeast Sixth Street connected the transit center to Interstate 405.
